**How Science Works: Evolution (A Student Primer), 2nd Edition.** May 2016, ca.100pp., Paperback (Springer) ISBN 9789401777476 ¥22,450

Evolution is just a theory, isn't it? What is a scientific theory anyway? Don't scientists prove things? What is the difference between a fact, a hypothesis and a theory in science? How does scientific thinking differ from religious thinking? Why are most leading scientists atheists? Are science and religion compatible? Why are there so many different religious beliefs but only one science?

**Uncertainty and Behaviour: Perceptions, Decisions and Actions in Business.** April 2016, 152pp., Hardback (Routledge) ISBN 9781472482419 ¥19,520

The book is divided into two main parts. Part I deals with the behaviour of individuals facing uncertainty and includes accessible explanations and examples of every-day applications, while Part II deals with behaviour in organisations facing uncertainty, where insights from Part I are combined and related to the organisational and work context to explore how, for example, (mis)-perceptions and decision-making biases impact managerial life. This is a must read for both managers and those who are seeking to better understand their own behaviour and management approach.

**A History of 'Relevance' in Psychology.** (Palgrave Studies in the Theory and History of Psychology) May 2016, 220pp., Hardback (Palgrave Macmillan/Springer) ISBN 9781137474889 ¥16,320

This book represents the first attempt to historicise and theorise appeals for 'relevance' in psychology. It argues that the persistence of questions about the 'relevance' of psychology derives from the discipline's terminal inability to define its subject matter, its reliance on a socially disinterested science to underwrite its knowledge claims, and its consequent failure to address itself to the needs of a rapidly changing world. The chapters go on to consider the 'relevance' debate within South African psychology, by critically analysing discourse of forty-five presidential, keynote and opening addresses delivered at annual national psychology congresses between 1950 and 2011, and observes how appeals for 'relevance' were advanced by reactionary, progressive and radical psychologists alike. The book presents, moreover, the provocative thesis that the revolutionary quest for 'social relevance' that began in the 1960s has been supplanted by an ethic of 'market relevance' that threatens to isolate the discipline still further from the anxieties of broader society. With powerful interest groups continuing to co-opt psychologists without relent, this is a development that only psychologists of conscience can arrest.

**The Palgrave Handbook of Adult Mental Health.** June 2016, 704pp., Hardback (Palgrave Macmillan/Springer) ISBN 9781137496843 ¥42,660

This Handbook gathers together empirical and theoretical chapters from leading scholars and clinicians to examine the broad issue of adult mental health. The contributors draw upon data from a variety of contexts to illustrate the multiple ways in which language as action can assist us in better understanding the discursive practices that surround adult mental health. Conversation and discourse analysis are useful, related approaches for the study of mental health conditions, particularly when underpinned by a social constructionist framework. In the field of mental health, the use of these two approaches is growing, with emergent implications for adults with mental health conditions, their practitioners, and/or their families. Divided into four parts; Reconceptualising Mental Health and Illness; Naming, Labelling and Diagnosing; The Discursive Practice of Psychiatry; and Therapy and Interventions; this Handbook provides a comprehensive overview of current debates regarding adult mental health.

**Phenomenology as Qualitative Research: A Critical Analysis of Meaning Attribution.** Aug 2016, 240pp., Hardback (Routledge) ISBN 9781138652811 ¥24,720

Phenomenology originated as a novel way of doing philosophy early in the twentieth century. In the writings of Husserl and Heidegger, regarded as its founders, it was a non-empirical kind of philosophical enquiry. Although this tradition has continued in a variety of forms, 'phenomenology' is now also used to denote an empirical form of qualitative research (PQR), especially in health, psychology and education. However, the methods adopted by researchers in these disciplines have never been subject to detailed critical analysis; nor have the methods advocated by methodological writers who are regularly cited in the research literature.

(Paperback ISBN 9781107566378 ¥6,270)

Scientists Making a Difference is a fascinating collection of first-person narratives from the top psychological scientists of the modern era. These readable essays highlight the most important contributions to theory and research in psychological science, show how the greatest psychological scientists formulate and think about their work, and illustrate how their ideas develop over time. In particular, the authors address what they consider their most important scientific contribution, how they got the idea, how the idea matters for the world beyond academic psychology, and what they would like to see as the next steps in research. The contributors, who were chosen from an objectively compiled list of the most eminent psychological scientists, provide a broad range of insightful perspectives. This book is essential reading for students, researchers and professionals interested in learning about the development of the biggest ideas in modern psychological science, described firsthand by the scientists themselves.

It is also the first text to explain the new and exciting Open Science practices, which encourage replication and enhance the trustworthiness of research. In addition, the book explains NHST fully so students can understand published research. Numerous real research examples are used throughout. The book uses today's most effective learning strategies and promotes critical thinking, comprehension, and retention, to deepen users' understanding of statistics and modern research methods. The free ESCI (Exploratory Software for Confidence Intervals) software makes concepts visually vivid, and provides calculation and graphing facilities. The book can be used with or without ESCI.

This first volume in a three-volume set covers many model developments that have occurred in item response theory (IRT) during the last 20 years. It describes models for different response formats or response processes, the need of deeper parameterization due to a multilevel or hierarchical structure of the response data, and other extensions and insights.

**Multi-State Survival Models for Interval-Censored Data.** Aug 2016, 232pp., Hardback (Chapman & Hall/CRC) ISBN 9781466568402 ¥16,650

Multi-state models describe stochastic processes that consist of transitions between states over time, such as the three-state illness-death model. Interval-censored data is extremely common as the exact time of transition from one state to another is unknown—only an interval of time is known. This book shows how to study this type of data. Many examples using real data from the medical and social science literature illustrate the methods. R and WinBUGS code is also provided to implement the methods, with the code and data available for download online.

The book is divided into five accessible and independent parts. The first part introduces the foundations of causal structures and discusses issues associated with standard mechanistic and difference-making theories of causality. The second part features novel generalizations of methods designed to make statements concerning the direction of effects. The third part illustrates advances in Granger-causality testing and related issues. The fourth part focuses on counterfactual approaches and propensity score analysis. Finally, the fifth part presents designs for causal inference with an overview of the research designs commonly used in epidemiology. Statistics and Causality: Methods for Applied Empirical Research also includes: New statistical methodologies and approaches to causal analysis

in the context of the continuing development of philosophical theories; End-of-chapter bibliographies that provide references for further discussions and additional research topics; Discussions on the use and applicability of software when appropriate

**Neuroimaging Personality, Social Cognition, and Character.** Feb 2016, 420pp., Hardback (Academic Pr.) ISBN 9780128009352 ¥22,410

Neuroimaging Personality, Social Cognition, and Character covers the science of combining brain imaging with other analytical techniques for use in understanding cognition, behavior, consciousness, memory, language, visual perception, emotional control, and other human attributes. Multidimensional brain imaging research has led to a greater understanding of character traits such as honesty, generosity, truthfulness, and foresight previously unachieved by quantitative mapping. This book summarizes the latest brain imaging research pertaining to character with structural and functional human brain imaging in both normal individuals and those with brain disease or disorder, including psychiatric disorders. By reviewing and synthesizing the latest structural and functional brain imaging research related to character, this book situates itself into the larger framework of cognitive neuroscience, psychiatric neuroimaging, related fields of research, and a wide range of academic fields, such as politics, psychology, medicine, education, law, and religion.

**Issues in Psychobiology.** June 2016, 224pp., Hardback (Routledge) ISBN 9781138640092 ¥23,420

At the time of original publication psychobiology was one of the most rapidly developing areas of psychology. Its growth owed much to recent advances both in techniques for studying the physiological bases of behaviour and in major conceptual advances in the way people thought about the brain. First published in 1989, this textbook introduction to the field looks at the state of psychobiology in the light of these advances. The issues covered include: the factors that have shaped the current state of the field; the value of animal subjects in the study of psychological processes; the problems of studying the brain, including the theoretical as-

sumptions underlying the most widely used methods; the current status of influential theories, like Stellar's 2-center theory of motivation and Papez's theory of emotion; the relationship between psychological theory and physiological data, such as recent accounts of the visual system; the problems presented by 'emergent properties' like consciousness.

However, disillusionment with Piagetian theory came rather quickly because many of its structural and developmental assumptions appeared incongruent with empirical evidence.

Drawing on research conducted mostly in Catalonia (Spain), Moisès Esteban-Guitart outlines a distinct vision of education enhanced by students' identities, which leads to a discussion of the sociocultural factors that shape the processes of learning. He brings these ideas to life by examining traits of a mobile-centric society, the present-day ecology of learning, and his three metaphors of learning (connecting knowledge, connecting minds, and connecting communities). He then suggests a number of basic princi-

ples regarding learning for the twenty-first century based on prior literature in the learning sciences. He presents the terms 'funds of identity' and 'meaningful learning experiences', and reviews the funds of knowledge approach and the Vygotskian basis for understanding identity. In the second part of the book, he illustrates a number of strategies for detecting students' funds of identity and their meaningful learning experiences, and describes some practical experiences based on the theoretical framework he adopted.

In this classic edition of their ground-breaking work, Usha Goswami and Peter Bryant revisit their influential theory about how phonological skills support the development of literacy. The book describes three causal factors which can account for children's reading and spelling development: Pre-school phonological knowledge of rhyme and alliteration; The impact of alphabetic instruction on knowledge about phonemes; Links between early spelling and later reading. This classic edition includes a new introduction from the authors which evaluates research from the past 25 years. Examining new evidence from auditory neuroscience, statistical modelling and orthographic database analyses, as well as new data from cognitive developmental psychology and educational studies, the authors consider how well their original ideas have stood up to the test of time.

Professor Engeström's exciting approach sees expansive learning as the central mechanism of transformation in societal practices and institutions. For researchers and practitioners in education, this book provides a conceptual and practical toolkit for creating and analyzing expansive learning processes with the help of interventions in workplaces, schools and communities. Chapters 1-3 situate the theory of expansive learning in the field of learning science. Chapters 4-8 contain empirical studies of expansive learning in various organizational settings (such as banks, schools and hospitals). In Chapters 9-10, the author looks at new challenges and possibilities arising from rapidly spreading 'wild-fire' activities (disaster relief, for example) and from the methodology of formative interventions aimed at triggering and supporting expansive learning. This book provides an integrative account of recent empirical studies and conceptual developments in the theory of expansive learning, and serves as a companion volume to Learning by Expanding.

How do various species of animals see colours? Which physical stimuli allow us to see colours and by which physiological mechanisms are they perceived? How and why do people differ in their colour perceptions? In answering these questions and others, this book offers an unusually broad account of the complex phenomenon of colour and colour vision. The book's broad and accessible approach gives it wide appeal and it will serve as a useful coursebook for upper-level undergraduate students studying psychology, particularly cognitive neuroscience and visual perception courses, as well as for students studying colour vision as part of biology, medicine, art and architecture courses.

The study of bilingualism unfolds against a varied backdrop of sociocultural and sociopolitical factors. While the nature

of bilingualism and multilingualism has often been misunderstood, the bilingual community is a dynamic and ever-growing part of the global population. This book pioneers the study of bilingualism across the lifespan and in all its diverse forms. In framing the newest research within a lifespan perspective, the editors highlight the importance of considering an individual's age — from infancy to late adulthood — when researching how bilingualism affects language acquisition and cognitive development. A key theme of the volume is the variability among bilinguals, which may be due to a host of individual and sociocultural factors.

What is intuition? What constitutes an intuitive process? Why are intuition concepts important? After many years of scholarly neglect, interest in intuition is now exploding in psychology and cognitive science. Moreover, intuition is also enjoying a renaissance in philosophy. Yet no single definition of intuition appears in contemporary scholarship; there is no consensus on the meaning of this concept in any discipline. Rational Intuition focuses on conceptions of intuition in relation to rational processes. Covering a broad range of historical and contemporary contexts, prominent philosophers, psychologists, and cognitive scientists explore how intuition is implicated in rational activity in its diverse forms. In bringing the philosophical history of intuition into novel dialogue with contemporary philosophical and empirical research, Lisa M. Osbeck and Barbara S. Held invite a comparison of the conceptions and functions of intuition, thereby clarifying and advancing conceptual analysis across disciplines.

Throughout the book, background to phenomena such as illusions of control, overconfidence and hindsight bias are discussed, before considering the respective empirical research, potential explanations of the phenomenon, and relevant applied perspectives. In contrast to the traditional view that body language is primarily concerned with the expression of emotions and the negotiation of social relationships, author Geoff Beattie argues instead that gestures reflect aspects of our thinking but in a different way to verbal language. Critically, the spontaneous hand movements that people make when they talk often communicate a good deal more than they intend.

**The Influence of Values on Consumer Behaviour: The value compass.** Aug 2016, 200pp., Hardback (Routledge) ISBN 9781138676473 ¥24,720

Substantial progress has been made in the conceptualization of values within psychology. The importance of values is also acknowledged in marketing, and companies use values to describe the core associations of their brand. Yet despite this, the values concept has received limited attention in marketing theory. The Influence of Values on Consumer Behaviour aims to bridge the gap between the conceptual progress of values in psychology, and the current practice in marketing and branding literature. It proposes the 'Value Compass', a comprehensive value system that is cross-culturally applicable to consumer behaviour and brand choice.

**Interviewing Children: The Science of Conversation in Forensic Contexts.** June 2016, 232pp., Hardback (American Psychological Association) ISBN 9781433822155 ¥12,540

Whether as eyewitnesses or victims, children are often interviewed to provide evidence for forensic investigations. But strategies that may work for interviewing adults often do not work on children. Because of children's incomplete language development, their greater risk of retrieving inaccurate information in response to memory cues, and their desire to say what they think the interviewer wants to hear (whether truthful or not), their testimony can be unreliable. Sometimes, the interviewer's challenge is a child who does not want to talk at all. In *Interviewing Children: The Science of Conversation in Forensic Contexts*, Debra Poole introduces the science of interviewing children by explaining the problems that can arise when adults talk to children and how a forensic perspective mitigates these problems. She discusses child development considerations and presents a flexible approach to interviewing children. Through her descriptions of best practices, brief summaries of supporting research, example interview dialogs, answers to common questions from practitioners, and a final section for trainers and policymakers, Poole provides a roadmap for anyone working in a forensic context.

obstacles to learning from failure and explores how they can be overcome. A range of topics are discussed that include why some people have a more negative emotional reaction to failure than others and how these negative emotions can be managed; why some people delay the decision to terminate a poorly performing entrepreneurial venture; anti-failure biases and stigmatism in organizations and society; and the role that the emotional content of narratives plays in the sense-making process. This thought-provoking book will appeal to academic researchers, graduate students and professionals in the fields of entrepreneurship and industrial psychology.
