## ホルモン、脳、行動・第3版

# Hormones, Brain and Behavior 3rd Edition

*Edited by Donald W. Pfaff, Laboratory of Neurobiology and Behavior at The Rockefeller University and Marian Joels, Scientific Director of the Brain Center Rudolf Magnus*

2016年12月出版予定 2640ページ ¥413,850

- ◇ 急速に成長している分野の包括的で最新の情報を網羅。
- ◇ 主要な脊椎および無脊椎動物のモデルシステムを扱い、その行動から分子遺伝学までを関連付ける。
- ◇ 分子から生態生理学まで、基礎科学から臨床までの広範なトピックスをカバー。
- ◇ ホルモンと行動の分野における学際的な理解を深めるための理想的な参考図書。

Hormones, Brain and Behavior, Third Edition offers a state-of-the-art overview of hormonally-mediated behaviors, including an extensive discussion of the effects of hormones on insects, fish, amphibians, birds, rodents, and humans. Entries have been carefully designed to provide a valuable source of information for students and researchers in neuroendocrinology and those working in related areas, such as biology, psychology, psychiatry, and neurology.

This third edition has been substantially restructured to include both foundational information and recent developments in the field. Continuing the emphasis on interdisciplinary research and practical applications, the book includes articles aligned in five main subject sections, with new chapters included on genetic and genomic techniques and clinical investigations.

This reference provides unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics. The topics cover an unusual breadth (from molecules to ecophysiology), ranging from basic science to clinical research, making this reference of interest to a broad range of scientists in a variety of fields.

**Centrality of History for Theory Construction in Psychology.** (Annals of Theoretical Psychology, Vol 14) Sept 2016, 244pp., Hardback (Springer) ISBN 9783319427591 ¥17,490

This book offers a comprehensive overview of the purpose of history for psychology. Its purpose is to ask why history should be of concern to psychologists in teaching and research, and in theory and in practice. The future position of humanities subjects is currently highly debated on all fronts. Chapters focus on the arguments from psychologists, upgrade the precision and quality of discussion, and thus, provide a base for affirming the place of history of psychology in the broad field of psychological activity. A fundamental question dominates the discussion. Is the purpose of the history of psychology to serve current psychology, rather than to contribute to historical knowledge – and to enter large debates about what historical knowledge means for being human? If the answer is yes, as most psychologists who come to the issues will presume, in what ways? Are these ways philosophically grounded, or do the social and political conditions of power and funding in universities dominate the arguments? In this volume, the contributors demonstrate the relation between historical investigations and current practice.

**New Handbook of Mathematical Psychology**

Volume 1: Foundations and Methodology. Dec 2016, Hardback (Cambridge U.P.) ISBN 9781107029088 ¥30,240

The field of mathematical psychology began in the 1950s and includes both psychological theorizing, in which mathematics plays a key role, and applied mathematics, motivated by substantive problems in psychology. Central to its success was the publication of the first 'Handbook of Mathematical Psychology' in the 1960s. The psychological sciences have since expanded to include new areas of research, and significant advances have been made in both traditional psychological domains and in the applications of the computational sciences to psychology. Upholding the rigor of the first title in this field to be published, the New Handbook of Mathematical Psychology reflects the current state of the field by exploring the mathematical and computational foundations of new developments over the last half-century. This first volume focuses on select mathematical ideas, theories, and modeling approaches to form a foundational treatment of mathematical psychology.

The Handbook of Psychophysiology has been the authoritative resource for more than a quarter of a century. Since the third edition was published a decade ago, the field of psychophysiological science has seen significant advances, both in traditional measures such as electroencephalography, event-related brain potentials, and cardiovascular assessments, and in novel approaches and methods in behavioural epigenetics, neuroimaging, psychoneuroimmunology, psychoneuroendocrinology, neuropsychology, behavioural genetics, connectivity analyses, and non-contact sensors. At the same time, a thoroughgoing interdisciplinary focus has emerged as essential to scientific progress.

ISBN 9783319427416 ¥24,290

This groundbreaking text takes current knowledge of the basal ganglia far from well-known motor-based models to a more inclusive understanding of deep-brain structure and function. Synthesizing diverse perspectives from across the brain-behavioral sciences, it tours the neuroanatomy and circuitry of the basal ganglia, linking their organization to their controlling functions in core cognitive, behavioral, and motor areas, both normative and disordered. Interactions between the basal ganglia and major structures of the brain are identified in their contributions to a diverse range of processes, from language processing to decision-making, emotion to visual perception, motivation to intent. And the basal ganglia are intimately involved in the mechanisms of dysfunction, as evinced by chapters on dyskinesia, Parkinson's disease, neuropsychiatric conditions, and addictions.

**The Evolution of the Primate Hand: Anatomical, Developmental, Functional, and Paleontological Evidence.** (Developments in Primatology: Progress and Prospects) Aug 2016, 571pp., Hardback (Springer)

ISBN 9781493936441 ¥30,510

This book demonstrates how the primate hand combines both primitive and novel morphology, both general function with specialization, and both a remarkable degree of diversity within some clades and yet general similarity across many others. Across the chapters, different authors have addressed a variety of specific questions and provided their perspectives, but all explore the main themes described above to provide an overarching "primitive primate hand" thread to the book. Each chapter provides an in-depth review and critical account of the available literature, a balanced interpretation of the evidence from a variety of perspectives, and prospects for future research questions. In order to make this a useful resource for researchers at all levels, the basic structure of each chapter is the same, so that information can be easily consulted from chapter to chapter. An extensive reference list is provided at the end of each chapter so the reader has additional resources to address more specific questions or to find specific data.

27. Ortega, J. (ed)

**Sociality in Bats.** July 2016, 413pp., Hardback (Springer) ISBN 9783319389516 ¥33,040

This book provides new insights into the social behavior of bats - one of the most fascinating topics currently being pursued by researchers. After an introduction reviewing the history of research in bat behavioral ecology, it covers

three major themes: bat sociality per se (Part I), bat communication (Part II), and ecological aspects (Part III). Part I offers a concise overview of the social organization and systems of bats, introducing readers to the complexity and dynamics of group structures. Part II is devoted to the innovative field of social communication, focusing on bat songs, dialects and calls. Part III discusses the influence of the environment on bat behavior, particularly with regard to roosting and foraging. This book addresses the needs of researchers working in behavioral sciences, evolution and ecology.

This volume provides insight into gibbon diet and community ecology, the mating system and reproduction, and conservation biology, all topics which represent areas of substantial progress in understanding socio-ecological flexibility and conservation needs of the hylobatid family. This work analyzes hylobatid evolution by synthesizing recent and ongoing studies of molecular phylogeny, morphology, and cognition in a framework of gibbon and siamang evolution. With its clearly different perspective, this book is written to be read, referenced, and added to the bookshelves of scientists, librarians, and the interested public.

The list of challenges facing nonhuman primates in the 21st century is a long one. The expansion of palm oil plantations to feed a growing consumer class is eating away at ape and monkey habitats in Southeast Asia and Central Africa. Lemurs are hunted for food in the poorest parts of Madagascar while monkeys are used as medicine in Brazil. Traditional cultural beliefs are maintaining demand for animal body parts in West African markets while viral YouTube videos of "cute" and "cuddly" lorises have increased their market value as pets and endangered their populations. These and other issues are addressed in this book by leading researchers in the field of ethnoprimatology, the study of human/nonhuman primate interactions that combines traditional primatological methodologies with cultural anthropology in an effort to better understand the nuances of our economic, ritualistic, and ecologic relationships.

**Funds of Identity: Connecting Meaningful Learning Experiences In and Out of School.**

Sept 2016, Hardback (Cambridge U.P.) ISBN 9781107147119 ¥19,000

Drawing on research conducted mostly in Catalonia (Spain), Moisès Esteban-Guitart outlines a distinct vision of education enhanced by students' identities, which leads to a discussion of the sociocultural factors that shape the processes of learning. He brings these ideas to life by examining traits of a mobile-centric society, the present-day ecology of learning, and his three metaphors of learning (connecting knowledge, connecting minds, and connecting communities). He then suggests a number of basic principles regarding learning for the twenty-first century based on prior literature in the learning sciences. He presents the terms 'funds of identity' and 'meaningful learning experiences', and reviews the funds of knowledge approach and the Vygotskian basis for understanding identity. In the second part of the book, he illustrates a number of strategies for detecting students' funds of identity and their meaningful learning experiences, and describes some practical experiences based on the theoretical framework he adopted.

**The Transformative Mind: Expanding Vygotsky's Approach to Development and Education.** Oct 2016, Hardback (Cambridge U.P.) ISBN 9780521865586 ¥21,600

The book suggests a transition from a relational worldview premised on the socio-political ethos of adaptation towards a transformative worldview premised on the ethos of solidarity and equality. Expansively developing Vygotsky's revolutionary project, the Transformative Activist Stance integrates insights from a vast array of critical and soci-

ocultural theories and pedagogies and moves beyond their impasses to address the crisis of inequality. This captures the dynamics of social transformation and agency in moving beyond theoretical and political canons of the status quo. The focus is on the nexus of people co-creating history and society while being interactively created by their own transformative agency. Revealing development and mind as agentive contributions to the 'world-in-the-making' from an activist stance guided by a sought-after future, this approach culminates in implications for research with transformative agendas and a pedagogy of daring. Along the way, many key theories of mind, development and education are challenged and radically reworked.

This handbook presents the most comprehensive account of eudaimonic well-being to date. It brings together theoretical insights and empirical updates presented by leading scholars and young researchers. The handbook examines philosophical and historical approaches to the study of happy lives and good societies, and it critically looks at conceptual controversies related to eudaimonia and well-being. It identifies the elements of happiness in a variety of areas such as emotions, health, wisdom, self-determination, internal motivation, personal growth, genetics, work, leisure, heroism, and many more. It then places eudaimonic well-being in the larger context of society, addressing social elements. The most remarkable outcome of the book is arguably its large-scale relevance, reminding us that the more we know about the good way of living, the more we are in a position to build a society that can be supportive and offer opportunities for such a way of living for all of its citizens.

This book discusses the paradigm of quantum ontology as an appropriate model for measuring cognitive processes. It clearly shows the inadequacy of the application of classical probability theory in modelling the human cognitive domain. The chapters investigate the context dependence and neuronal basis of cognition in a coherent manner. According to this framework, epistemological issues related to decision making and state of mind are seen to be similar to issues related to equanimity and neutral mind, as discussed in Buddhist perspective. The author states that quantum ontology as a modelling tool will help scientists create new methodologies of modelling in other streams of science as well.

 ISBN 9781107022942 ¥26,780

This book portrays one day in the communicative life of the owner of an auto repair-shop in Texas. He walks, looks, points, shows and explains engines, makes sense by gesture, speaks, manages, makes his life-world, and in the process reproduces social structures and himself as individual. Self-Making Man is the first comprehensive study of a communicating person; it reveals socially shared and personal practices, as well as improvisational actions by which a person inhabits and makes sense of the world with others. After decades of discussion on embodiment, this study is the first to investigate one body in its full range of communicative activities. Grounded in phenomenology and committed to the methodological rigor of context analysis and conversation analysis, Self-Making Man departs radically from contemporary research practice: it shows that, to take embodiment in human interaction seriously, we must conceive of it as individuation and organic, self-sustaining life: as autopoiesis.

**The Psychology of Time Perception.** July 2016, 261pp., Hardback (Palgrave Macmillan) ISBN 9781137408822 ¥17,490

How do people perceive time? This book presents a wealth of contemporary and classical research, including some of the history and philosophy of time perception. Influential internal clock-based models of time perception receive an in-depth but non-technical introduction and discussion. The role of cognition and emotion in perceiving time is also explored, as well as questions derived from time experience in daily life, such as why time seems to pass more quickly in one situation rather than another. Classical and modern research on timing in children is reviewed, as well as work on time perception and time experience in older people. Leading recent models of animal timing are also discussed in a non-mathematical way.

**The Expression of Emotion: Philosophical, Psychological and Legal Perspectives.** (Series: Studies in Emotion and Social Interaction) Oct 2016, Hardback (Cambridge U.P.) ISBN 9781107111059 ¥19,000

The Expression of Emotion collects cutting-edge essays on emotional expression written by leading philosophers, psychologists, and legal theorists. It highlights areas of interdisciplinary research interest, including facial expression, expressive action, and the role of both normativity and context in emotion perception. Whilst philosophical discussion of emotional expression has addressed the nature of expression and its relation to action theory, psychological work on the topic has focused on the specific mechanisms underpinning different facial expressions and their recognition.

**Ecological Crisis, Sustainability and the Psychosocial: Beyond Behaviour Change.**

(Series: Studies in the Psychosocial) Sept 2016, ca.225pp., Hardback (Palgrave Macmillan)

ISBN 9781137351593 ¥17,490

This book draws on recent developments across a range of perspectives including psychoanalysis, narrative studies,

social practice theory, posthumanism and trans-species psychology, to establish a radical psychosocial alternative to mainstream understanding of 'environmental problems'. Only by addressing the psychological and social structures maintaining unsustainable societies might we glimpse the possibility of genuinely sustainable future. The challenges posed by the reality of human-caused 'environmental problems' are unprecedented. Understanding how we respond to knowledge of these problems is vital if we are to have a hope of meeting this challenge. Psychology and the social sciences have been drafted in to further this understanding, and inform interventions encouraging sustainable behaviour. However, to date, much of psychology has appeared happy to tinker with individual behaviour change, or encourage minor modifications in the social environment aimed at 'nudging' individual behaviour. As the ecological crisis deepens, it is increasingly recognised that mainstream understandings and interventions are inadequate to the collective threat posed by climate change and related ecological crises.

This book applies the psychopathy concept toward the understanding of crime. Drawing on hundreds of studies and his own clinical, research, and practitioner experience

working with the most antisocial and violent offenders, the author demonstrates that psychopathy can explain all forms of crime across the life course, and also examines the biosocial foundations of the disorder. With an abundance of case studies and historical references, written in a distinctive writing style, the book is equally fascinating to the academic scholar and the true crime buff alike.

This book engages the practice of community-based psychology through a critical lens in order to demonstrate that clinical practice and psychological assessment in particular, require more affirmative psychopolitical agency in the face of racial injustice within the urban environment. Macdonald includes examples of clinical case analyses, vignettes and ethnographic descriptions while also drawing upon a cross-fertilization of theoretical ideas and disciplines. An oft neglected element of community psychology is the practice of community informed psychological assessment, especially within the inner city environments. This book uniquely suggests ideas for how clinical practice, in relationship to issues such as race and cultural memory can serve as a substantial vehicle for social justice against the backdrop of a prejudiced criminal justice system and mental health delivery system.

By (re)introducing the concept 'bourgeois' as an analytical term and describing this contemporary subject as a psychic economy rather than just as a social class, Panu shows the intractability of contemporary forms of enjoyment and neoliberalism's periodic outbursts of aggressiveness to be connected by a recurrent circuit of trauma and anxiety originating in the bourgeois subject's difficult relationship with symbolic authority.
