

国際結晶学データ集 H巻 粉末回折
**International Tables for
Crystallography**
Volume H Powder Diffraction
Edited by **CHRISTOPHER GILMORE & H. U. SCHENK**

2017年9月出版予定 600 ページ ハードカバー ¥44,450

Powder diffraction is the mostly widely used crystallographic method, with applications spanning all aspects of structural science. This new volume of International Tables covers all aspects of the technique with over 50 chapters written by experts in the field.

Consisting of seven parts, this volume will:

- ◇ Provide an overview of the principles of powders diffraction.
- ◇ Discuss the radiation sources used for powder-diffraction studies, instrumentation, the use of different sample environments and methods of sample preparation.
- ◇ Cover methodology, including data processing, indexing and reduction, whole-pattern modelling and quantitative analysis. With an overview of the relevant crystallographic databases also provided.
- ◇ Focus on structure determination (including real- and reciprocal-space methods and the maximum-entropy method), structure refinement and structure validation.
- ◇ Discuss defects, texture, microstructure and fibres, including stress and strain, domain size and thin films.
- ◇ Review the available software for powder diffraction.
- ◇ Describe applications to many areas of industrial and academic importance, including macromolecules, minerals, ceramics, cement, polymers, forensic science, archaeology and pharmaceuticals, discussing both the theory and applications.

Volume H will be the key reference for all powder diffractionists from beginners to advanced practitioners, and has been designed to be a practical volume without sacrificing rigour. Many examples of the powder-diffraction method are discussed in detail, and in several cases the data used in the examples will be available for the reader to download.

国際結晶学データ集・全8巻
**International Tables for
Crystallography 5th Edition,
8 Volume Set**

Edited by C. P. Brock

全8巻セット／6250ページ

セット価格 ¥427,290

International Tables for Crystallography is the definitive resource and reference work for crystallography and structural science.

Each of the eight volumes in the series contains articles and tables of data relevant to crystallographic research and to applications of crystallographic methods in all sciences concerned with the structure and properties of materials. Emphasis is given to symmetry, diffraction methods and techniques of crystal-structure determination, and the physical and chemical properties of crystals. The data are accompanied by discussions of theory, practical explanations and examples, all of which are useful for teaching.

International Tables for Crystallography comprises more than 6,000 pages including nearly 2,000 pages of symmetry tables which are vital for the analysis of crystal structures:

各巻タイトル

Volume A: Space-group symmetry, 6e

Volume A1: Symmetry relations between space groups, 2e

Volume B: Reciprocal space, 3e

Volume C: Mathematical, physical and chemical tables, 3e

Volume D: Physical properties of crystals, 2e

Volume E: Subperiodic groups, 2e

Volume F: Crystallography of biological macromolecules, 2e

Volume G: Definition and exchange of crystallographic data

This edition includes a new edition of Volume A, making International Tables the most up-to-date, dynamic, and comprehensive reference work available to crystallographers, and to all those who use crystallography across a wide range of fields.
