The Routledge Handbook of the Philosophy and Psychology of Luck. (Routledge Handbooks in Philosophy) Feb 2019, 570pp., Hardback (Routledge) ISBN 9780815366591 ¥42,710

Luck permeates our lives, and this raises a number of pressing questions: What is luck? When we attribute luck to people, circumstances, or events, what are we attributing? Do we have any obligations to mitigate the harms done to people who are less fortunate? And to what extent is deserving praise or blame affected by good or bad luck? Although acquiring a true belief by an uneducated guess involves a kind of luck that precludes knowledge, does all luck undermine knowledge? And how accurate are our luck attributions anyway? The academic literature has seen growing, interdisciplinary interest in luck, and this volume brings together and explains the most important areas of this research. It consists of 39 newly commissioned chapters, written by an internationally acclaimed team of philosophers and psychologists, for a readership of students and researchers. Its coverage is divided into six sections: I: The History of Luck II: The Nature of Luck III: Moral Luck IV: Epistemic Luck V: The Psychology of Luck VI: Future Research.

Teaching Psychology: An Evidence-Based Approach. Jan 2019, 352pp., Hardback (Wiley) ISBN 9781118981436 ¥18,460

(Paperback ISBN 9781118958056 ¥9,220)

Teaching Psychology offers an evidencebased, student-centered approach that is filled with suggestions, ideas, and practices for teaching college-level courses in ways that contribute to student success. The authors draw on current scientific studies of learning, memory, and development, with specific emphasis on classroom studies. The authors offer practical advice for applying scholarly research to teaching in ways that maximize student learning and personal growth. The authors endorse the use of backward course design, emphasizing the importance of identifying learning goals (encompassing skills and knowledge) and how to assess them, before developing the appropriate curriculum for achieving these goals. Recognizing the diversity of today's student population, this book offers guidance for culturally responsive, ethical teaching. The authors explain how to envision the learning objectives teachers want their students to achieve and advise how to select assessments to evaluate if the learning objectives are being met.

(Paperback ISBN 9781316629611 ¥6,460)

What happens in our brains when we compose a melody, write a poem, paint a picture, or choreograph a dance sequence? How is this different from what occurs in the brain when we generate a new theory or a scientific hypothesis? In this book, Anna Abraham reveals how the tools of neuroscience can be employed to uncover the answers to these and other vital questions. She explores the intricate workings of our creative minds to explain what happens in our brains when we operate in a creative mode versus an uncreative mode. The vast and complex field that is the neuroscience of creativity is disentangled and described in an accessible manner, balancing what is known so far with critical issues that are as yet unresolved. Clear guidelines are also provided for researchers who pursue the big questions in their bid to discover the creative mind.

Space, Time and Number in the Brain: Searching for the Foundations of Mathematical Thought. Nov 2018, 374pp., Paperback (Academic Pr.) ISBN 9780128103654 ¥19,390

The study of mathematical cognition and the ways in which the ideas of space, time and number are encoded in brain circuitry has become a fundamental issue for neuroscience. How such encoding differs across cultures and educational level is of further interest in education and neuropsychology. This rapidly expanding field of research is overdue for an interdisciplinary volume such as this, which deals with the neurological and psychological foundations of human numeric capacity. A uniquely integrative work, this volume provides a much needed compilation of primary source material to researchers from basic neuroscience, psychology, developmental science, neuroimaging, neuropsychology and theoretical biology.

Cognitive and Social Neuroscience of Aging. (Series: Cambridge Fundamentals of Neuroscience in Psychology) Feb 2019, Hardback (Cambridge U.P.) ISBN 9781107084643 ¥18,460

(Paperback ISBN 9781107446557 ¥7,380)

The Neuroscience of Aging is an introduction to how aging affects the brain, intended for audiences with some knowledge of psychology, aging, or neuroscience. The book includes figures illustrating brain regions so that extensive familiarity with neuroanatomy is not a pre-requisite. The depth of coverage also makes this book appropriate for those with considerable knowledge about aging. This book adopts an integrative perspective, including topics such as memory, cognition, cognitive training, emotion, and social processes. Topics include consideration of individual differences and the impact of disorders (e.g. Alzheimer's disease) on brain function with age. Although many declines occur with age, cognitive neuroscience research reveals plasticity and adaptation in the brain as a function of normal aging. This book is written with this perspective in mind, emphasizing the ways in which neuroscience methods have enriched and changed thinking about aging.

Hurrelmann and Quenzel introduce the concept of developmental tasks to analyse the typical physical, psychological and social requirements of adolescence. The topic of adolescent development in Europe is one which has received little academic attention in recent years. *Developmental Tasks in Adolescence* makes an exciting contribution to the field by applying socialization theory to four major developmental tasks of life: qualifying, bonding, consumption and participation, arguing that if the tasks in these areas are mastered, then personal individuation and social integration can take place, a prerequisite for the formation of self-identity.

Sociolinguistic Variation in Children's Language: Acquiring Community Norms. (Series: Studies in Language Variation and Change) June 2019, Hardcover (Cambridge U.P.) ISBN 9781107172616 ca. ¥20,310

How we vary our speech is fundamental in signalling who we are, where we're from and where we're going. How and when does such variation arise? Here, leading experts Jennifer Smith and Mercedes Durham address this question through a sociolinguistic analysis of the speech of preschool children in interaction with their primary caregivers. Bringing together two fields of linguistic research - variationist sociolinguistics and first language acquisition - the study focusses both qualitative and quantitative analysis of a range of variables to show when and how variation is acquired by young children, and the effect the caregiver's interaction has on this process. In doing so, they tackle a fundamental question in language research: when and how do children acquire the highly complex patterns of variation widely attested in adult speech?

(Paperback ISBN 9781316640906 ¥10,520)

Play takes up much of the time budget of young children, and many animals, but its importance in development remains contested. This comprehensive collection brings together multidisciplinary and developmental perspectives on the forms and functions of play in animals, children in different societies, and through the lifespan. The Cambridge Handbook of Play covers the evolution of play in animals, especially mammals; the development of play from infancy through childhood and into adulthood; historical and anthropological perspectives on play; theories and methodologies; the role of play in children's learning; play in special groups such as children with impairments, or suffering political violence; and the practical applications of playwork and play therapy. Written by an international team of scholars from diverse disciplines such as psychology, education, neuroscience, sociology, evolutionary biology and anthropology, this essential reference presents the current state of the field in play research.

A Comparison of Eastern and Western Parenting: Programmes, Policies and Approaches. Feb 2019, 208pp., Hardback (Routledge) ISBN 9781138574069 ¥28,060

Parenting adolescents is a challenging task for parents. Professionals offer a range of support and parenting programmes to support parents. However, the importance of culturally adapting parenting programmes to benefit parents and their adolescent children hasn't always been understood. This book provides a comparison of East and West parenting approaches and parenting programmes to show how vital a culturally sensitive approach is to the positive development of the parent-adolescent relationship. It offers a comprehensive overview of current theories and research on parenting adolescents. It focuses on comparing the differences in parenting style and practice between Chinese parents and their Western counterparts and the policy context in Chinese culture with that in the West. It also offers guidance on how to conduct an evaluation of parenting programmes and how to adapt them for the right cultural setting.

This book demonstrates that, through participating in family reminiscing, in which adults help children learn the forms and functions of talking about the past, young children come to understand and evaluate their experiences, and create a sense of self defined through individual and family stories that provide an anchor for understanding self, others and the world. Fivush draws on three decades of research, from her own lab and from others, to demonstrate the critical role that family stories and family storytelling play in child development and outcome.

(Paperback ISBN 9781108401302 ca. ¥10,520)

This Handbook reviews a wealth of research in cognitive and educational psychology that investigates how to enhance learning and instruction to aid students struggling to learn and to advise teachers on how best to support student learning. The Handbook includes features that inform readers about how to improve instruction and student achievement based on scientific evidence across different domains, including science, mathematics, reading and writing. Each chapter supplies a description of the learning goal, a balanced presentation of the current evidence about the efficacy of various approaches to obtaining that learning goal, and a discussion of important future directions for research in this area. It is the ideal resource for researchers continuing their study of this field or for those only now beginning to explore how to improve student achievement.

Bodies and Other Objects: The Sensorimotor Foundations of Cognition. Dec 2018, Hardback (Cambridge U.P.) ISBN 9781107060289 ¥22,160

Bodies and Other Objects is written for students, scholars and anyone with an interest in embodied cognition - the claim that the human mind cannot be understood without regard for the actions and capacities of the body. The impulse to write this book was a dissatisfaction with the inconsistent, and often shallow, use of the term 'embodied cognition'. This text attempts to reframe cognitive science with a unified theory of embodied cognition in which sensorimotor elements provide the basis for cognition, including symbolic exchanges that arise within a society of agents. It draws ideas and evidence from experimental psychology, neuroscience, philosophy and anthropology in reaching the conclusion that human cognition is best understood as the means by which exchanges within a constantly evolving network of skilful bodies and objects are regulated so as to further human interests.

This lively lecture series by a leading expert introduces the theory, practice and application of a versatile, rigorous and well-developed approach to cross-linguistic semantics: the NSM approach originated by Anna Wierzbicka. Topics include: history and philosophy of the study of meaning, semantic primes and molecules, emotions, evaluation, verbs and event structure, cultural key words and scripts. Case studies come from English, Chinese, Danish, and other languages. Applications in language teaching and intercultural education are also covered, along with comparisons between NSM and other leading approaches to linguistic semantics. The book will appeal to students and scholars of linguistics at all levels, communication and translation scholars, and anyone interested in a systematic and non Anglocentric approach to meaning, culture and cognition. The Impulse to Gesture: Where Language, Minds, and Bodies Intersect. Oct 2018, 248pp., Hardback (Cambridge U.P.) ISBN 9781108417204 ¥20,310

Gestures are central to the way people use language when they interact. This book places our impulse to gesture at the very heart of linguistic structure: grammar. Based on the phenomenon of negation - a linguistic universal with clear grammatical and gestural manifestations - Simon Harrison argues that linguistic concepts are fundamentally multi modal and shows how they lead to recurrent bindings between grammar and gesture when people speak. Studying how speakers express negation multi modally in a range of social and professional contexts, Harrison explores how and when people gesture, what people achieve linguistically and discursively with their gestures, and why we find similar uses of gesture in different languages (including spoken and signed language). Establishing the inseparability of grammar and gesture, this book is an important reference for any researcher interested in the relation between language, gesture, and cognition.

Spatial Biases in Perception and Cognition. Oct 2018, 494pp., Hardback (Cambridge U.P.) ISBN 9781107154988 ¥25,850

Our experience of the world is influenced by numerous spatial biases, most of which influence us without our being aware of them. These biases are related to illusions and asymmetries in our perception of space, relationships between space and other qualities, dynamics of moving objects, dynamics of scene configuration, and dynamics related to perception and action. Consideration of these biases provides insight into how we perceive, remember, and navigate space, as well as how we interact with objects and people in space. This volume introduces and reviews numerous spatial biases, and provides descriptions and examples of each bias. The contributors discuss historical and current theories for many biases, and for some biases, provide new explanatory theories. Providing a 'one-stop shop' for information on such a key aspect of our experience in the world, this volume will interest anyone curious about our understanding of space.

(Paperback ISBN 9781316638545 ¥12,000)

This second edition of the renowned Cambridge Handbook of Creativity expands on the first edition with over two thirds new material reaching across psychology, business, entrepreneurship, education, and neuroscience. It introduces creativity scholarship by summarising its history, major theories and assessments, how creativity develops across the lifespan, and suggestions for improving creativity. It also illustrates cutting-edge work on genetics and the neuroscience of creativity, alongside creativity's potential for both benevolence and malevolence. The chapters cover the related areas of imagination, genius, play, and aesthetics and tackle questions about how cultural differences, one's physical environment, mood, and self-belief can impact creativity. The book then examines the impacts on creativity of behaviour by teachers, managers, and leaders in particular.

In all cognitive domains, neuropsychological research has advanced through the study of individual patients, and detailed observations and descriptions of their cases have been the backbone of medical and scientific reports for centuries. Cases of Amnesia describes some of the most important single case studies in the history of memory, as well as new case studies of amnesic patients. It highlights the major contribution they make to our understanding of human memory and neuropsychology.

Written by world-leading researchers and considering the latest theory and techniques in the field, each case study provides a description of the patient's history, how their memory was assessed, and what conclusions can be made in relation to cognitive models of memory.

Power is an inherent feature of social interactions, yet it is hard to define and therefore understand. This book is the first to organize current interdisciplinary theorizing and research about power from leading academics in areas such as social psychology, communications, family studies, and public health. It also focuses exclusively on how power operates and affects close relationship processes, while the theoretical insights provided point the way toward new lines of research and understanding. Using specific examples to illustrate complex theoretical explanations and supplying thorough descriptions of the existing literature on power in close relationships, this book is an essential resource for researchers, professionals, students, or laypeople seeking to better understand how power operates in those relationships that are most important to us.

Few communication behaviors are more consequential to the development and maintenance of close relationships than the expression of affection. Indeed, people often use affectionate gestures to initiate or accelerate relationship development. In contrast, the absence of affection in established relationships frequently coincides with relational deterioration. This text explores the scientific research on affection exchange that has emerged from the disciplines of communication, social and clinical psychology, family studies, psychophysiology, sociology, nursing, and behavioral health. Specific points of focus include the individual and relational benefits - including health benefits - of affectionate behavior, the significant detriments associated with lacking sufficient affection, and the risks of expressing affection. It also discusses the primary social and cultural influences on affection exchange, critiques principal theories and measurement models, and offers suggestions for future empirical research.

Understanding Willing Participants: Milgram's Obedience Experiments and the Holocaust, Vol 2. Oct 2018, 295pp., Hardcover (Palgrave Macmillan) ISBN 9783319979984 ¥18,210

Horrified by the Holocaust, social psychologist Stanley Milgram wondered if he could recreate the Holocaust in the laboratory setting. Unabated for more than half a century, his (in)famous results have continued to intrigue scholars. Based on unpublished archival data from Milgram's personal collection, volume one of this two-volume set introduces readers to a behind the scenes account showing how during Milgram's unpublished pilot studies he step-by-step invented his official experimental procedure—how he gradually learnt to transform most ordinary people into willing inflictors of harm. Volume two then illustrates how certain innovators within the Nazi regime used the very same Milgram-like learning techniques that with increasing effectiveness gradually enabled them to also transform most ordinary people into increasingly capable executioners of other men, women, and children. Volume two effectively attempts to capture how step-by-step these Nazi innovators attempted to transform the Führer's wish of a Jewish-free Europe into a frightening reality. By the books' end the reader will gain an insight into how the seemingly undoable can become increasingly doable.

Identity, Society and Transformative Social Categories: Dynamics of Construction, Configuration and Contestation. Jan 2018, 272pp., Hardcover (SAGE Publications) ISBN 9789352804627 ¥10,730

Identity is central to the understanding of human social, cultural, and political expressions. In recent times, it has become a major topic for intellectual discourse to represent the processes of dynamic social change and transformation such as the expansion of information and communication technology (ICT); social and mass media; education; and economic globalization. Organized into seven chapters, Identity, Society, and Transformative Social Categories: Dynamics of Construction, Configuration, and Contestation provides an in-depth presentation of the conceptual formulations of the essence, construction, and transformation of identities. A highlight of the book is its coverage of the process of rejuvenation of identities of the indigenous people of Australia in the context of the national policy of reconciliation and development. It comprehensively answers the myriad questions that are commonly raised on identity and its various facets.

Personality and Close Relationship Processes. (Series: Advances in Personal Relationships) Nov 2018, 260pp., Hardback (Cambridge U.P.) ISBN 9781107109681 ¥21,420
 (Paperback ISBN 9781107524750 ¥5,900)
 Few observers of relationship dynamics would dispute the

claim of interdependence theorists that a defining feature of close relationships is the extent to which partners influence each other's thoughts, feelings, or behaviors. However, partners do not behave simply in response to each other's behavior; both partners in a given relationship bring themselves - indeed, their selves - into the relationship as well. Not only are individuals' selves enormously complex and rich in content, but so too are the multitude of personality characteristics, including traits, values, attitudes, motives, and emotions, that contribute to selves' richness. Gaines, Jr provides a major integration of research on personality with research on relationship science, and demonstrates how personality constructs can be readily incorporated into the two most influential theories of close relationships: attachment theory and interdependence theory.

Disability and Care Work: State, Society and Invisible Lives. Sept 2018, 236pp., Hardcover (Sage Publications) ISBN 9789352807741 ¥8,050

This book explores the lived reality of children with disabilities and those involved in parenting and caring for them. It discusses the extent to which the needs of the disabled and their caregivers have been met by health and welfare initiatives, and finds substantial gaps. The book describes vividly how the families of children with disability negotiate the uncertain journey of identifying their child's disability, obtaining a diagnosis, accessing appropriate services and their ongoing efforts to reconcile with and recognise their child's unique situation and mode of being. It critically examines the gendered dimensions involved in caregiving, the role of the state and civil society, and the legal and institutional frameworks in place. The book calls for inclusion of disability treatment at the primary care level, enhanced technology use for diagnosis and information, coordinated national level disability care policy formulation and organised action by the disabled and their caregivers to ensure their needs are addressed by the state and society.

This Handbook presents a forward-looking review of IO psychology's understanding of both workplace technology and how technology is used in IO research methods. Using interdisciplinary perspectives to further this understanding and serving as a focal text from which this research will grow, it tackles three main questions facing the field. First, how has technology affected IO psychological theory and practice to date? Second, given the current trends in both research and practice, could IO psychological theories be rendered obsolete? Third, what are the highest priorities for both research and practice to ensure IO psychology remains appropriately engaged with technology moving forward?

ペアレンティング・ハンドブック 第3版・全5巻 Handbook of Parenting 3rd Edition (5 Volumes)

Edited by Marc H. Bornstein, National Institute of Child Health and Human Development, Bethesda, MD, USA

Published by Routledge

2019年3月出版予定 全5巻/3441ページ
ハードカバー 各巻 ¥44,950 ペーパー版 各巻 ¥18,220

This highly anticipated third edition of the Handbook of Parenting brings together an array of field-leading experts who have worked in different ways toward understanding the many diverse aspects of parenting. Contributors to the Handbook look to the most recent research and thinking to shed light on topics every parent, professional, and policymaker wonders about. Parenting is a perennially "hot" topic. After all, everyone who has ever lived has been parented, and the vast majority of people become parents themselves. No wonder bookstores house shelves of "how-to" parenting books and magazine racks in pharmacies and airports overflow with periodicals that feature parenting advice. However, almost none of these is evidence-based. The Handbook of Parenting is. Period. Each chapter has been written to be read and absorbed in a single sitting, and includes historical considerations of the topic, a discussion of central issues and theory, a review of classical and modern research, and forecasts of future directions of theory and research. Together, the five volumes in the Handbook cover Children and Parenting, the Biology and Ecology of Parenting, Being and Becoming a Parent, Social Conditions and Applied Parenting, and the Practice of Parenting.
