This new four volume collection will assemble

important contributions to the field, exploring the foundations of the subject and language development, variation in languages and biology, and complexities in language and biology.

Pronunciation is one of the core areas of linguistics, language teaching and applied linguistics. It is a salient aspect of spoken language and is of widespread interest to researchers because of the window it provides on questions involving spoken language, and to teachers because of its relevance to the immediate concerns of classroom instruction. This new four volume collection will gather the key historical articles and contemporary research in pronunciation to provide a one stop research resource for student and scholar.

This new four volume collection, *Pidgins and Creoles*, will showcase the major areas of research and their achievements in this multidisciplinary field. The collection will include both works that represent the status quo as well as those that are controversial in nature but which have nevertheless functioned as major catalysts for the production of knowledge. An important focus of the volumes will be to critically assess existing models, truths, research agendas and methodological frameworks in the research on these languages. While the bulk of research to date has principally investigated so-called English-lexified creoles, the volumes will also draw on work carried out on the range of such languages, crucially including not just creoles but also pidgins.

#### About the Series: **Critical Concepts in Linguistics**

Routledge Critical Concepts in Linguistics series provides authoritative reprints of the discipline's best and most influential scholarship. This series looks at language from the point of view of the user, at the choices made and the constraints encountered when we use language. Edited by experts in the field, each set puts the development of fundamental concepts and themes into their historical context, as well as providing students and researchers with a snapshot of contemporary debates and current thinking.

*Critical Concepts in Linguistics*

**Volume 1: Language in political globalization**

**Volume 2: Language in commercial globalization**

**Volume 3: Language in cultural globalization**

**Volume 4: Language in communicative globalization**

*Edited by Ingrid Piller and Alexandra Grey*

Sociolinguistic questions related to globalization are widely considered highly innovative and the field sustains a vigorous and vibrant research and publication program. A relatively new yet burgeoning field such as this can be confusing and difficult to navigate for students and scholars; a guided reading program such as is offered by the collections in the Critical Concepts in Linguistics series would thus constitute a most welcome addition to the field.

The meaning of "globalization" is highly contested and part of the difficulty of gaining an overview of the field of "language and globalization" is related to the fact that the term "globalization" is used in many different ways. The proposed collection will therefore take a phenomenological approach centered on different aspects of globalization: political, commercial, cultural and communicative globalization can be identified as distinct strands with clear linguistic implications; these constitute a readily apparent organization principle for the four volumes.

There are a number of disciplines that produce work of relevance to the sociolinguistics of globalization. To begin with linguistics, it is particularly anthropological linguistics and sociolinguistics that have concerned themselves with language and globalization. Additionally, relevant contributions come from applied linguistics, contact linguistics, bi- and multilingualism studies, educational linguistics, historical linguistics, language policy and planning, and second language acquisition. Outside linguistics, globalization studies constitute a discipline in its own right and research relevant to language-related issues has also disciplinary bases in anthropology, business studies, cultural studies, history, intercultural communication, and sociology. Bringing these multidisciplinary bases of language and globalization into conversation with each other will be one of the main selection challenges.

As with my previous edition in the series, Language and Migration, in addition to topical selection of the most important research, I will aim to showcase research from a wide range of geographical, regional and historical contexts. Throughout, an attempt will be made to strike a balance between general overview articles and contextually-situated case-studies.

In keeping with the Critical Concepts in Linguistics series, each volume will contain around twenty articles, and about two-thirds will be sourced from journals and the remainder from book chapters. Up to half of all the articles in each volume will have been published in the past five years; the remainder will be made up by older work in order to feature foundational research and to trace analytic developments. Up to three quarters of the contributions will come from various subfields of linguistics. The remainder will feature relevant work from outside the discipline.

What makes language in the media different from 'everyday' or 'person-to-person' domains is the presence - seen or unseen, human or technical - of some intermediary or facilitator, and it is the impact on language by this facilitation or mediation that is the focus of this new 4 volume collection, *Language and the Media*. Including seminal theoretical articles, case studies, and review articles, the collection will look at language as a means of managing the media audience, will explore language as a topic in the media, and will set out how language is used as a mode of media communication.

Incorporating approaches from linguistics and psychology, *The Handbook of Psycholinguistics* explores language processing and language acquisition from an array of perspectives and features cutting edge research from cognitive science, neuroscience, and other related fields.

The Handbook provides readers with a comprehensive review of the current state of the field, with an emphasis on research trends most likely to determine the shape of psycholinguistics in the years ahead. The chapters are organized into three parts, corresponding to the major areas of psycholinguistics: production, comprehension, and acquisition. The collection of chapters, written by a team of international scholars, incorporates multilingual populations and neurolinguistic dimensions. Each of the three sections also features an overview chapter in which readers are introduced to the different theoretical perspectives guiding research in the area covered in that section.

Timely, comprehensive, and authoritative, *The Handbook of Psycholinguistics* is a valuable addition to the reference shelves of researchers in psychology, linguistics, and cognitive science, as well as advanced undergraduates and graduate students interested in how language works in the human mind and how language is acquired.
