Occupational Safety and Hygiene VI is the compilation for 2018 of the most recent work of some selected authors from #99# countries within the domain of occupational safety and hygiene (OSH). The included works are focused on selected topics, which include occupational safety, risk assessment, safety management, ergonomics, management systems, environmental ergonomics, physical environments, construction safety, and human factors, among others. The presented work represents the state-of-the-art and is mainly based on research carried out at universities and other research institutions. By its importance, some contributions are also based on interesting practical case studies developed by OSH Practitioners within their own companies. Accordingly, this book contains useful information to be up-to-date on the above mentioned domains, as well as providing some practical tools and approaches currently used by OHS practitioners in a global context.
