生涯をつうじた情動と認知の統合

Integrating Emotions and Cognition Throughout the Life Span

By G. Labouvie-Vief, University of Geneva, Switzerland

2014年10月出版 200ページ 定価 ¥22,460

This book synthesizes the literature on emotional development and cognition across the lifespan. The book proposes a core language by which to describe positive and problematic developmental changes by recourse to a parsimonious set of core principles, such as elevations or declines in tension thresholds and their relation to the waxing and waning of the cognitive system over the life course.

Volume 1: Attitudes and Social Cognition

Volume 2: Group Processes

Volume 3: Interpersonal Relations

Volume 4: Personality Processes and Individual Differences

This four-volume handbook summarizes the current state of knowledge on major topics within the fields of personality and social psychology. Coverage is contemporary, is provocative, and sets an agenda for future work in the area.

Volume 1 focuses on attitudes and social cognition, describing the two main directions in which this domain has moved over the past quarter century. First, there is increasing focus on the phenomenology of daily life, with emphasis on the contents and drivers of mundane daily life. These include emotional experience, religious beliefs, feelings of control and agency, the function of conscious thought, and how all of these underpin our sense of self and important social behaviors. The second trend has been toward a deeper understanding of basic human nature, with increasing focus on unconscious or implicit cognitive processes that influence virtually all facets of daily life (e.g., how power transforms how we think about others and what qualities we associate with leadership).

Volumes 2 and 3 provide a broad framework to guide theorizing and research with respect to group processes and interpersonal relations in social psychology. Topics of discussion include theory and research on prejudice, stereotyping, and discrimination; intergroup and intragroup processes; and the formation, maintenance, and dissolution of relationships. Together, the chapters reflect a wide range of theoretical perspectives at different levels of analysis, including perspectives from disciplines outside of psychology (e.g., biology, neuroscience, health sciences, sociology).

Volume 4 contains sections on personality processes and individual differences as well as sections on more holistic approaches, such as The Person in Context and The Person as a Whole.

Authors provide not only the foundational material on their topic but also discuss the big issues or bones of contention and what they see as the ways forward to resolve these issues.

Communication in Autism. (Trends in Language Acquisition Research, 11) 2014, 263pp., Hardback (John Benjamins)

Communication in Autism adopts a multidisciplinary approach to explore one of the most common developmental disorders associated with communication impairment. Perhaps the most fascinating thing about communication in autism is that variation is as extreme as it could possibly be. While some individuals with autism have age-appropriate language, a number have exceptional language skills; others have little or no spoken language. In between these extremes are individuals who experience significant linguistic impairments. These impairments can affect peer relations and literacy skills. The chapters in this volume provide comprehensive coverage of both the theoretical underpinnings and the practical aspects of autistic communication. The result is a volume that showcases the wide range of methodologies being used in this field of research. It is invaluable for scientists, service providers, parents, individuals with autism, and students learning about communication and autism (e.g., in psychology, speech pathology, and education).
