He was professor of education at the University of Birmingham in 1919 until his retirement in 1946, then president of the British Psychological Society for 1947-1948. His research covered many areas including child development, imagery, mental testing, home and classroom discipline. Out of print for many years the *Collected Works of C.W. Over the past several years, "spatial reasoning" has gained renewed prominence among mathematics educators, as spatial skills are proving to be not just essential to mathematical understanding but also strong predictors of future success beyond the classroom in fields such as science, technology, and engineering. By exploring both primary and emergent dimensions, *Spatial Reasoning in the Early Years* helps define the concept of spatial reasoning and provides compelling evidence of the need for a clear focus within early education specifically. The authors review the research, look across current theories, and investigate implications for contemporary school mathematics pedagogy as they identify areas of inquiry necessary to bring a stronger spatial reasoning emphasis into the classroom.
